Subject: Recommendation comment

From the IC recommendation: This seemed a little too prescriptive, plus, I thought we were going to use PV Shelf as an example which used a different approach to education and outreach of fish advisories. The purpose of the workshops and charrettes at Housantic was not education and outreach of fish advisories.

You are right. Housatonic was about understanding the remedy. I will split the recommendation to include the concept of overall communication on the remedy. Then the mini-workshop and charrette will make sense.

Thanks for all the other good comments.
